Manufacturer  
Calibrator  
Engineer Consultant  
Service Provider

## TANK CALIBRATION SERVICES

### TANK INSPECTION

- » Leading Storage Tank Calibrator & Surveyor in India & Abroad.
- » Approved Govt. Licensed Repairer/Calibrator of Storage Tank ( Legal Metrology Dept.)
- » Bengal's Heritage and Many Award Winner Company.
- » INDUSTRIAL NDT CONSULTANCY (NDT)
- » TANK SETTLEMENT SURVEY AND ROUNDNESS TEST INSPECTION IN INDIA & ABROAD
- » MSV SETTLEMENT SURVEY
- » PIPING AND INSTRUMENTATION DIAGRAM (PID) PIPELINES SURVEY
- » WEIGHING SCALES SERVICE AND SUPPLY
- » LIQUOR MEASURE MANUFACTURER & SUPPLY
- » COMPLETE WEIGHING AND MEASURING SOLUTIONS
- » WEIGHING SCALES SERVICE AND SUPPLY
- » LIQUOR MEASURE MANUFACTURER & SUPPLY

### CALIBRATION USING MODERN TECHNOLOGY

#### **REAL BRIEF**

Established in 1874, M/s Girish Chandra Ghosh encountered succession issues later on. Actually M/S. Girish Chandra Ghosh organization split after legal partition on 1972-73 into two part as M/S Girish Chandra Ghosh & G.G.S and M/S Girish Chandra Ghosh & Co. Here second part did business for few years in the manufacture and repair of beam scales and weights only after that surrender license and stopped business, while M/S Girish Chandra Ghosh & G.G.S continue and carrying the heritage organization from initial position till date. Under the leadership of Sujit Ghosh and Jyotsna Ghosh, the company reached numerous accomplishments. Currently, running in new peak under the stewardship of Supriyo Ghosh, the fifth-generation heir and Managing Partner, M/s Girish Chandra Ghosh & GGS proudly commemorates its 150<sup>th</sup> year since inception.

# 150 Years Celebration

# 150 Years Celebration

# Our Journey

In 1874, M/s Girish Chandra Ghosh ( Currently M/s. Girish Chandra Ghosh & G.G.S.) has started his business M/s. Girish Chandra Ghosh, Manufacturer, Seller & Service provider of beam Scale (Class-B.C.D) in British period. We have introduced ourselves as a Govt. approved storage Tank calibrator also & we have been working successfully during past long years throughout the India & Abroad. Our product quality and our decided service satisfies the various level of our society, such as National & Multinational companies, Govt. sectors in India as well as common people of our surroundings. We undertake tank calibration, inspection, ultrasonic testing, tank settlement and tilt survey

## 150 YEARS IN BUSINESS

We are known as '**Girish Chandra Ghosh & G.G.S.**' Formerly **Girish Chandra Ghosh (ESTD 1874)**. Over the years, **Bengal's Heritage Company**. **Our Product has been kept for display in the Govt. Industrial & Commercial Museum, Kolkata West Bengal India.**

We have earned a strong reputation as leading providers of **Tank Calibration Systems. Approved License holder of Legal Metrology Department (Weights & Measure) Approved Govt. Licensed Calibrator/Repairer of Petroleum, Petrochemicals, Chemical, Oil & Gas, Other Liquid Storage Tanks/Bulk Flow Meter/ Weighing & Measuring Solution.**

**Manufacturer/Repairer of Weighing Scales Service & Supply/Model approved by Govt. of India and Complete Weighing Solution, Liquor Measure. Flow Meter Calibration.) / NDT Inspection,/Pipeline UST/P& ID Diagram /Roundness Settlement/ Survey in INDIA & ABROAD.**

We offer storage tank calibration/ gauging services to industries like Wineries, Distilleries, Sugar Factories,

Oil & Gas, Refineries, Petrochemicals, Chemical,

Pharmaceutical, and Dairy with valid government licenses from the Director of Legal Metrology Weights and Measures Department state wise in India.

We've been taking care of Clients and businesses around here for 150 years now—since 1874!

Needless to say, there are very few companies who have been around for that long. That only happens when you've had the fortitude and commitment to get through tough times—and you have many loyal and reputed customers, as we do.

Throughout the year, we're going to be celebrating our 150th anniversary by holding special events and promotions for our customers and the community. Please follow us on our Social Media and Company website for more information [www.girishcalibration.com/](http://www.girishcalibration.com/) [www.storage-tankcalibration.in](http://www.storage-tankcalibration.in)

Many thanks for your loyalty and trust in us over the years!

Thank you for putting your trust and confidence in our company.

M/s. Girish Chandra Ghosh & G.G.S.

# SHIP TANK CALIBRATION

## About Us

### M/s. GIRISH CHANDRA GHOSH & G.G.S. (International Business)

Growing with technology and committed to quality we are a Govt. approved License service provider (Storage Tank Calibrator) to the clients in the petroleum and other industries. As a pre-eminent calibration company with past long years experience we have strongly developed ourselves into leading storage tank calibrators of India and abroad. In order to bring out excellence in our service we adhere to International Standards of techniques and quality in our entire calibration service providing activities.

We became an approved vendor of IOC, BPCL, HPCL, Tata, Reliance and many other companies. At present we are running our Calibration Work business in Storage Tank / Vat / Sphere / Horizontal Tank / Bullets / Fixed Roof Tank / Fixed Cum Floating Roof Tank / Floating Roof Tank / Ship Barge etc. Our product, quality and our dedicated service satisfies the various level of our society, such as various National & Multinational Companies, Govt. & Non-Govt. Sectors in India as well as common people of our surroundings.

ISO 9001-2008 Certified Company

NSIC-MSME registered Unit  
NSIC-ONICRA credit rated Co.

To ascertain gain or loss in sales, purchases to provide only reliable means of maintaining adequate control over the storage & distribution & stock keeping & in industrial production process control, as Oils, chemicals & its allied products are very costly items business & service render from it. Profit & Loss depends on accuracy of ship tank or barge storage tank calibration work.

Ship tanks and barge tank calibration can now be done quickly and with the utmost accuracy at all levels using the Internal Electro-Optical Distance Ranging Method by using laser scanning and an extremely accurate and fast scanner supported by a powerful software. It is ideal for every ship, but especially for floating storage vessels, delivery barges, chemical tankers, bunker tanks etc., where accuracy is of utmost importance

No matter the shape of the tank or the deadwood inside, you can have tables accurate at any level. List and trim corrections are calculated accurately without the approximations and restrictions of the old style trigonometric methods. Field measurements can be done in hours; hence there is no need to have your vessel waiting days to be calibrated.

Our skill and understanding of every tank detail and the ability to incorporate them into final tables makes us stand out among the crowd. We use the most accurate, reliable and fastest laser measurement systems available. International Method followed: API MPMS 2.8.A

Final calibration tables in ullage and innage (sounding) are made along with correction for ship "List" and "Trim", which is very essential when ship is not on an even keel.

## HISTORICAL FACT

During the 18th century, Great Britain's rule extended over many countries, including India, imposing strict laws and regulations. In these challenging times, a Bengali named Girish Chandra Ghosh started his own business in 1874 to manufacture Beam Scale locally. He sold them at a minimal price, competing against the expensive imported Beam Scale from Europe.

The acceptance for locally produced Beam Scales grew significantly. In 1947 when India gained independence, Ghosh's Enterprise was honored as a "Prestigious Vintage Company" in India and their such product is displayed at the Govt. Industrial Museum at 45 Ganesh Chandra Avenue, Kolkata.

In 1957, India adopted the Metric System to compete globally. Units like Milligram, Kilogram, and Metric Ton were introduced in India's weight and measure sector and Girish Chandra Ghosh's Enterprise adopted to this change. They diversified to meet various industrial needs and eventually began serving large industries.

In 1969, Girish Chandra Ghosh expanded its production to include Platform Scale Manufacturing competing with the popular English brand, AVERY and bring success for the Enterprise.

In 1973, this heritage enterprise changed its name to M/s. Girish Chandra Ghosh & GGS as a partnership concern.

Gradually M/s. Girish Chandra Ghosh & GGS expanded into all sectors of weight and measurement. In 1990, it began measuring Compressed Natural Gas (CNG) and has since become a leading manufacturer in India's weight and measurement sector for all forms of substances, including solids, liquids, and gases. The enterprise has also ventured into Calibration Technology to ensure the accuracy of all measuring machines, particularly for liquids and gases.

M/s. Girish Chandra Ghosh & GGS, through the adoption of modern technology and successful measurement implementation, has acquired technology from OIML and also acquired from the American Petroleum Institute, an internationally recognized body. This has led to several international contracts. The company diversified into survey services like Tank Settlement and Health Survey of Storage Tanks in 2020. In 2021, it expanded into Liquor Measure (PEG), and in 2022, it entered the Non-Destructive Testing (NDT) field.

M/s. Girish Chandra Ghosh & GGS, with a 150-year history in the weight and measure field, is registered with NSIC and highly rated by CRISIL. It has expanded to multiple states beyond West Bengal, including Odisha, Assam, Uttar Pradesh, Bihar, Jharkhand, Haryana, Punjab, Sikkim, Gujrat, Chattisgarh, Madhya Pradesh, Rajasthan, Maharashtra, and Goa, and is licensed by the Legal Metrology Department. With a dedicated team of over 50 Plus technical staff, this Small Enterprise provides quick and efficient customer service under the leadership of Mr. Supriyo Ghosh, the current Managing Partner and running the business from its corporate office in Kolkata.

Beside manufacturing of Weighing Scale M/s. Girish Chandra Ghosh & GGS, is approved vendor for large-scale companies like IOC, BPCL, HPCL, TATA, and RELIANCE, has become a reliable platform for many MSMEs. Additionally, it provides services like Storage Tank Calibration, 3D Laser Scanning, Health Surveys of Storage Tanks and Pipelines, and Detailed Plant Layout drawings.

M/s Girish Chandra Ghosh & GGS, a registered Small Enterprise of INDIA, has been recognized nationally for their significant contributions to the weight and measure sector. They have received awards from the numerous Organisations and Chambers of Commerce.

They also involve in social services for the underprivileged and environmental causes. Their vision is to expand their expertise globally with the motto 'MEASURE SOLID TO LIQUID WITH GASES', M/s Girish Chandra Ghosh & GGS is committed to serve the mankind in Weight & Measure Industry in more significantly with total proud.

ISO 9001: 2015 Certified Company | Register With Office of Zonal Director General for Foreign Trade

# Historical Background

## Our Company : Heritage of Bengal

Our Product has been kept for display in the  
**Govt. Industrial & Commercial Museum, Kolkata**

### Vision

Our vision is to become the recognized industry leader by our customers in the Storage Tank Calibration businesses in which we compete.

### Technical Competence

Whether it be an inclined horizontal tank whose volume increases exponentially, a tank with uneven bottom, dished ends, blades and heating coils inside, a complicated bottom shell arrangement, a floating roof tank with liquid displacement to be taken care of, a pressurized Horton sphere or a horizontal bullet, we are always a step ahead of a critical assignment our engineering capability speaks on the ground. We have developed unique correlated physical, mathematical and error free volumetric solutions. Calibration or survey data can be provided on CD or sent via email in spreadsheet format, also for SAP and other integration.

### Mission

We are trying to keep our old goodwill and maintain customer satisfaction and to serve our society and social development at large. We have gradually designed, developed and offered an extensive array of Electronic Weighing Scales which are high in performance durable in quality and gives optimal output to the clients in weighing scale line of activity. In Storage Tank Calibration Work our Mission / Goal for modernization (subject to weights & measure Department approval). We have already introduced safe laser beam measurement & latest laser distance ranging and optical triangulation technology for higher accuracy. At the same time we have done ISO Certification and we will try to acquire all India license for all states in India in our activity.

### Our Commitment

The Leading company in calibration world. We are committed to meet consumer's requirement by offering consistent quality service and at competitive price. Company's profit depends on the accuracy of storage tank calibration chart.

# OUR TANK CALIBRATION EXPERTISE

M/s. Girish Chandra Ghosh & G.G.S offers a sophisticated tank calibration service, formulating highly accurate calibration data for tanks of various shapes, sizes and designs. The combination of years of calibration experience with the latest software enables us to provide highly accurate, cost effective tank and sphere calibrations.

Using the latest laser theodolite technology for tank calibration, engineers and technicians are equipped with state-of-the-art measuring devices. The use of EODR (Electro Optical Distance Ranging) and laser scanning offers a quicker, safer, low impact solution for strapping storage vessels.

Tank calibrations are conducted to the exacting requirements of the appropriate international standards published by the International Organization for Standardization (ISO) or by the American Petroleum Institute (API). In addition we can apply our innovative Modern Technology to provide highly accurate calibration data with increased procedural safety.

M/s Girish Chandra Ghosh & G.G.S. is a leader in the physical calibration of all types of vessels such as static storage tanks, demountable tanks and ships including specialized gas tanks.

M/s. Girish Chandra Ghosh & G.G.S. has also developed expertise in the calibration of vertical shore tanks, rigid prismatic tanks, membrane tanks, horizontal cylinders and spherical tanks.

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

# Methodology

A) **Chapter 2.2 A:** Measurement and Calibration of Upright Cylindrical Tanks by the Manual Tank Strapping Method. Chapter 2.2B Calibration of Upright Cylindrical Tanks using the Optical Reference Line Method. Chapter 2.2C/ISO 7507-3:1993 Calibration of Upright Cylindrical Tanks Using the Optical-Triangulation Method.

B) **Chapter 2.2D/ISO 7507-4- 1995:** Calibration of Upright Cylindrical Tanks using the Internal Electro-Optical Distance Ranging Method.

**Chapter 2.2E/ISO 12917-1-2002:** Petroleum and Liquid Petroleum Products-Calibration of Horizontal Cylindrical Tanks-Part1: Manual Methods

**Chapter 2.2F/ISO 12917-2-2002:** Petroleum and Liquid Petroleum Products-Calibration of Horizontal Cylindrical Tanks-Part 2: Internal Electro-Optical Distance Ranging Method.

**Chapter 2.2G :** Calibration of Upright Cylindrical Tanks using the Total Station Reference Line Method Standard 2552 Measurement and Calibration of Spheres and Spheroids.

C) We apply the most appropriate methodology for Tank Calibration understanding of the characteristic and geometry of a particular tank is absolutely essential. Here is where long years of experience, engineering and mathematical background is indispensable.

A combination of traditional strapping and physical calibration to the latest laser distance ranging and optical triangulation technology may be required to acquire all the necessary field data of any tank. Every tank may require different methods and approaches to achieve accurate data.

In India, we follow rules laid down by the Directorate of Legal Metrology (Weights and Measure Department) for vertical cylindrical tanks for petroleum products also called the "strapping method" Internationally and for any tank being approved by CPWD in India, we may also follow BIS 2007, BIS 2009, BIS 2166 and international standards like ISO 7507- Part 1 to 4, ISO 12917, API (American Petroleum Institute) 2550, API 2551, API 2552, API MPMS 2.8A, from which the national standards and rules are derived. The ISO rules have also been recommended by OIML (International Organization of Legal Metrology of which every country including India is a member.

Internal survey is carried out in tanks where it is safe to enter enabling us to measure datum plates, internal deadwood & tank bottom floor/ shape. Underground horizontal tanks require internal measurements. Bottom plate unevenness is profiled and physical calibration with water is done upto flush point as required. Safe Laser beam measurements are also used for internal measurements for Horton spheres and underground cylindrical tanks.

All field data are fed into our computer with customized software for specific corrections like tape temperature corrections, thickness corrections, deadwood corrections, etc. and shell wise calculations as per International ISO methods and rules laid down by the Weights and Measures Dept. Complex mathematical integration, formulae and calculations are involved in case of horizontal tanks where ends are torispherical, tank is tilted as volume increment is non-linear.

Calibration charts are made in units as per requirement. In India, for spirit tanks in distilleries/breweries under excise, gauging tables are also computed as per excise rules. Calibration charts can also be given in weight. Tank calibration data can be provided on softcopy data for uploading to inventory monitoring software.

## Horizontal/ spherical tanks

International method: ISO 12917- part 1, API 2551.  
BIS: IS-2009. Internal Dia. (Vertical & horizontal) of all shells. Length of horizontal tanks, datum plate height. Inclination & spherical dish-end measure of horizontal tanks calibration of Horton Spheres (API 2552 method) and horizontal bullets: determination of internal vertical & horizontal diameters, position of auto gauge with respect to tank floor. Accurate Distance Lasers with maximum/ minimum length and slope determination can be used.

## Liquid Cargo Ship tanks

International API MPMS 2.8A method is followed.  
Measurements are done for deadwoods, corrugated bulkheads, dead rises, bilge radius, etc. Correction for trim, list and temperature is done.

## On-site Physical Calibration

For uneven, inclined tank floors, spherical or conical bottoms, determination of flush point of bottom of tanks by measured water through flow meter or prover. Floatation of roof of floating roof tanks by water is done to determine volume displacement by the weight of the roof. This displacement is to be applied for density corrections of liquid stored. Wet calibration at intervals is required for deformed, inclined horizontal tanks or irregular bulging rectangular tanks.

## Tank Settlement Survey

API 653-B method is followed. Out of Roundness, tank tilt, settlement survey.

# INTRODUCTION TO STORAGE TANKS

# STORAGE TANKS

Storage tanks containing organic liquids, non organic liquids, vapors and can be found in many industries. Most storage tanks are designed and built to the American Petroleum Institute API-650 specification.

These tanks can have different sizes, ranging from 2 to 90m diameter or more.

They are generally installed inside containment basins in order to contain spills in case of rupture of the tank. Industries where storage tanks can be found are: petroleum producing and refining, petrochemical and chemical manufacturing, bulk storage and transfer operations, other industries consuming or producing liquids and vapors.

## Types of Storage Tanks

Basically there are eight types of tanks used to store liquids:

1. Fixed-roof tanks
2. External floating roof tanks
3. Internal floating roof tanks
4. Domed external floating roof tanks
5. Horizontal tanks
6. Pressure tanks
7. Variable vapor space tanks
8. LNG (Liquefied Natural Gas) tanks

The first four tank types are cylindrical in shape with the axis oriented perpendicular to the sub grade. These tanks are almost exclusively above ground. Horizontal tanks can be used above and below ground.

Pressure tanks often are horizontally oriented and spherically shaped to maintain structural integrity at high pressures. They are located above ground. Variable vapor space tanks can be cylindrical or spherical in shape.

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

## MAINTAIN ACCURATE STOCK CONTROL BY ENSURING THAT YOUR CALIBRATION TABLES ARE UP TO DATE AND ACCURATE

**M/s. GIRISH CHANDRA GHOSH & G.G.S**

### Why Tank Calibration is essential?

Customers face a need for accurate volumetric tables and quantity measurement, to control stock held in storage vessels. M/s. Girish Chandra Ghosh & G.G.S can provide accurate and detailed measurement and calibration of storage tanks to ensure customers don't encounter issues.

Up to date accurate calibration tables are an essential requirement for stock control and loss management, this is especially important for customs bonded sites such as distilleries and the oil and gas industry.

Maintaining up to date tank calibration data is of vital importance in maintaining customer confidence, identifying potential losses in stock and resolving loading issues, thereby supporting client's operational efficiency.

**ONGH**

**G G G**™  
M/s. Girish Chandra Ghosh & G.G.S.

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

## OUR CAPABILITIES

Tank calibration is available for any site with a tank farm including:

- Independent storage facilities
- Small distribution depots
- Large fuel terminals
- Oil refineries
- Power plants
- Petrochemical Industries
- Pharmaceutical Industries
- Lpg Bottling Plants (Liquid Petroleum Gas)
- Steel Plants
- Fertilizers Industries

Covering tanks storing a vast array of substances including:

- Oil storage and refineries
- Breweries, Distilleries, soft drinks (bulk liquids)
- Beverages Companies
- Sugar Industries

We have the ability to provide volumetric capacity tables in litres per mm for:

- Vertical Tanks
- Horizontal Tanks Above Ground
- Horizontal Tanks Under Ground
- Blending Tanks
- Bullets with Spherical ends
- Elliptical Tanks
- Rectangular Tanks
- Horton Spheres
- Spherical Tanks
- Double-wall Tanks
- Fixed Roof Tanks
- Floating Roof Tanks
- Cryogenic and Pressurized Tanks
- Wooden Vats and Casks

We also have the capabilities to provide surveys on:

- Tank settlement for vertical storage tanks
- Tilt check
- Tank shell out of roundness (Seal surveys) for vessels with a floating roof

These hi-tech surveys produce highly accurate data that is important to be able to identify the common 'tank shell out of roundness' problem which can affect floating roofs, by impeding their vertical motion.

## M/S. GIRISH CHANDRA GHOSH & G.G.S

# AREA OF SERVICE ALL UNDER ONE ROOF

1. Tank Calibration/ Re-Calibration
2. Tank Settlement Survey
3. Ovality Settlement Survey
4. Terminal Survey
5. Health Survey Of Tank & Pipeline
6. Roundness Checking Of Leading Storage Tank
7. Ndt. (Non Destructive Testing)
8. Ust (Ultrasonic Testing)
9. Many Types Of Drawings Isometric And P & Id

10. Flow Meter Reverification & Stamping Work Assistance
11. Dip Tape & Dip Stick Supply
12. Remote Visual Inspection
13. Magnetic Flux Leakage Testing
14. Magnetic Particle Testing
15. Penetrant Testing
16. Api-653 Tank Inspection
17. Api-570 Piping Inspection
18. Survey/ Inspection & Ndt Work
19. Weighing Machine Supply & Re-Verification (West Bengal Only)
20. Weights & Measure Manufacturer/ Repairer/ Amc/ Dealer
21. Weights & Measure Items Solutions
22. Liquor Measure Manufacturer/ Supply
23. 3d Laser Scanning Tank Calibration
24. Tank Cleaning
25. Proving Tank
26. Pipeline Fabrication & Erection Job
27. Msv, Horton Sphere, Above Ground Bullet Mechanical & Hydrotesting Work
28. Pipeline, Tank, Horton Sphere, Msv, Bullet Painting
29. Civil Work, Sketch, Logo Related Any Kind Of Painting Job

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

# CALIBRATION OF STORAGE TANK

We are Govt. approved Calibrator (Rep.) of Petroleum, Chemicals, Oil & Other Liquid Storage Tanks

## Standard For Vertical Storage Tank

- 2007-1974** : Method for Calibration of Vertical oil storage tanks
- 2008-1961** : Method for computation of capacity tables of vertical oil storage tanks

Weights and Measures (Legal Metrology Department)  
Rules—Ninth A Schedule, Part No. II & III of the S.W.M.  
(General) Rules, 2011

### PHYSICAL CALIBRATION PROCESS AT SITE IN TANK

- Determination of flush point of bottom of vertical cylindrical tanks by water through flow meter.
- Physical calibration of uneven conical or spherical bottom of tanks and spirit vats up to the datum plate of vertical cyl. portion.
- Floatation of roof of floating roof tanks by water to determine volume displacement by weight of the roof. This displacement is to be applied for density corrections of liquid stored.
- Complete physical calibration is required for deformed underground FRP horizontal tanks which have lost its cylindrical shape, in measured intervals through accurately calibrated flow meter and data recorded for later processing and interpolation of volume into even segments.

### MEASUREMENTS PROCESS AT SITE ON TANK

- External Tank Strapping method (ISO 7505 Part 1) and Part ii of 9th, Schedule of the Standards of Weights & Measures (General) Rules 2011.
- Datum plate height with reference to individual course heights.
- Determination of Dip-reference height and point of gauging.
- Inclination & Spherical dish-end measure of horizontal tanks.
- Calibration of pressurized Spherical tanks and horizontal bullets: internal vertical and horizontal diameters, position of magnetic servo float with respect to bottom.
- Internal deadwood measurements.
- Ultrasonic Plate thickness measure.

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

# CALIBRATION USING MODERN TECHNOLOGY

(OPTICAL CALIBRATION METHODS)

Methodology Used International  
Standard OIML Approved

(India is a Member Country of OIML)

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

# STATUTORY OBLIGATION FOR STORAGE TANK CALIBRATION

As per the provision of section 27 of the standard weights and < General > measure rule 2011 no weights and measure shall be sold or offered possessed for sale use of kept for use in any transaction or protection unless it has been verified & stamp and as provided in State Enforcement Rule 2011 framed under the Legal Metrology act 2009. The storage tank including vats used or intended to be used in any Transaction or tor protection must be revived or recalibrated and stamp at least once in 5 years the definition of the word the Transaction defined in 2 < u > of the standard Legal Metrology act 2009 under which the said act has been enacted which runs as follows :-

- (i) Any contract for Sale, Purchase, Exchange or any other purpose.
- (ii) Any assessment of Royalty, Toll or other dues.
- (iii) Any assessment of work done, wages dues or service rendered, their Storage tank can't be excluded from the purview of the above said Act & Rules.

For ISO quality certification of Calibration of Storage Tank is essential accurately required by ISO official

- To meet Central Excise / State Excise & custom Duty obligation in view of the aforesaid - it is essential to get storage tank calibrated by owners and to get rid of any legal action as provided in the said Act.
- Fines & seizures for noncompliance.

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

**ISO 7507-1:** 2003 Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 1: Strapping method

**ISO 7507-2:** 2005 Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 2: Optical-reference-line method

**ISO 7507-3:** 2006 Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 3: Optical-triangulation method

**ISO 7507-4:** 2010 Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 4: Internal electro-optical distance-ranging method

**ISO 7507-5:** 2000 Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 5: External electro-optical distance-ranging method

## ADVANTAGES OF OPTICAL CALIBRATION

- Much safer method
- Much faster method
- Much accurate data & result
- Less man power needed
- Simple process to calibrate a tank
- Less Power consumption
- Possible to calibrate in difficult weather

## WHY CALIBRATION IS ESSENTIAL?

To ascertain gain or loss in sales, Purchase to provide only reliable means of maintaining adequate control over the storage & distribution & stock keeping & in industrial production process control, as Oils, Chemicals & its allied products are very costly items business & services render from it

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

# CALIBRATION OF HORIZONTAL TANK ABOVE/UNDERGROUND USING MODERN TECHNOLOGY

M/s. Girish Chandra Ghosh & G.G.S. are one of the preeminent service providers of Horizontal Tank Calibration services in the market. Our team experts will visit your company and analyze the condition of the tank in detail. They physically measure the tank as per the standard and compute the calibration table also. We calibrate tank by volumetric method, Laser method and 3D Laser Technology method. We also specialize in providing calibration services for horizontal tank keeping in mind their build, tank tilting, roundness etc. Inspection Prior to Calibration: Time of Construction Structural modifications in conjunction with API 653 Inspection Minimal 5 year's intervals.

## Horizontal Tanks and Bullets (Procedures)

1. Measurement Standards: Indian IS 2009 and 2166, International API MPMS, ISO 12917
2. External measurements of circumference of each course at 2 points 20% from the ends of welds. These points will be marked with crayon/ chalk before measurements. Each tank comprises of multiple courses and a mean circumference will be derived from the measurements. Circumference will be taken with steel tapes at a tension of <5 kg.
3. When accessed internally, laser beam measurements are used inside to determine vertical and horizontal diameters with laser distance meters or laser total stations.
4. Length of each course will be added translating into tank length. This length will also be measured externally with a laser distance meter by aligning the instrument at one end and holding a vertical plate aligned to the other end, which will give tank external length. Internal length will be derived after deducting plate thickness at both ends.
5. Ultrasonic plate thickness measurement with digital

meters will be taken at positions around the marked circumference line and mean thickness of each course will be obtained. This thickness will be used to arrive at internal diameter from external measurements. A general thickness report will be provided in addition to tank tables.

6. Tank outer mean vertical diameter and horizontal mean diameter measurements will be done with laser distance meter with maximum length reported from the meter. This will be done at both ends of the tanks. A vertical plumb line and a horizontal axis will be drawn as a reference line prior to measurements.
7. Dip reference height and distance of the point from the tank ends on top of tank will be measured.
8. Tank inclination/ slope is an important factor in horizontal tanks. We use automatic laser levels with visible laser beams which clearly mark out the horizontal and vertical line inside the tank. For tanks which cannot be accessed inside, the instrument will be placed on top of the tank one end on a tripod/ solid elevated base. The instrument will give out a laser beam which is crosshair type in both horizontal and vertical directions. Vertical depth measurement from this laser line to the top of the tank will be carried out from one end to another end. The vertical rise at another end will provide the inclination of the tank with respect to the horizontal. This value will be the maximum vertical rise of the tank at the end opposite to outlet. When the

tank is accessible inside, the vertical rise at one end is similarly taken inside the tank. Also, the vertical distance from laser level to datum plate/ point is recorded.

9. Some horizontal tanks have ends which are not flat they can be bulged, dished, truncated cone, hemi spherical or tori spherical. It is important measure the profile of both the ends. For external measurements, a vertical plumb will be dropped from the tank side at middle position of the tank and horizontal measurement recorded near the base from the weld (tan line). This procedure is repeated at both ends. The knuckle radius is measured for tori spherical ends and end diameter measured for truncated cones. For internal measurements, a vertical plumb line is created at the tan line and the maximum offset is measured at the centre position with laser distance gauge.
10. Calculations are done as per BIS 2166 (Basic Indian Method), API MPMS 2.2 E, ISO 12917 (Complete International Method). Temperature correction, thickness correction, liquid head stress correction is applied on volumes analyzed and processed on custom made formulations. These volumes in our tables will have a uniform exponential curve as opposed to intermittent linear progression when calculations are done manually with water filling at fixed intervals/ volumes. Very complex mathematical formulations are used to arrive at volumes for inclined horizontal tanks. Softcopy are also provided in Excel or pdf file.

# CALIBRATION FOR HORIZONTAL STORAGE TANK

## BIS Indian Standard

**2009-1975** : Method for Calibration Horizontal and tilted oil storage tanks

**2166-1963** : Method for computerization of capacity tables for horizontal and tilted oil storage tank

## Horizontal Tank Calibration Rules

# NON DESTRUCTIVE TESTING (NDT)

Non-Destructive Testing (NDT) is a group of analysis techniques employing specific methods to evaluate the condition of plant and equipment without causing damage. NDT is carried out at all stages of the asset life cycle from the construction of plant and equipment through to regular testing during planned downtime or at set intervals throughout its asset life. Successful and consistent application of NDT depends heavily on personnel training, industry knowledge and experience. Without experience in using NDT techniques, it can be easy to misread false indicators or non-relevant indications of what may look like a simple reading, resulting in approval of a piece of plant as safe when in fact it has discontinuities.

## Why NDT?

### Employing NDT techniques assists to ensure:

- Plant and equipment safety.
- Site and personnel safety.
- Prevention of loss of productivity in unplanned downtime.
- Cost effective savings in simple repairs instead of complicated repairs or equipment replacement

## What are the Advantages of using NDT?

There are a number of distinct advantages, the most obvious of which is that the pieces being tested are left undamaged by the process, allowing for an item to be repaired rather than replaced should any problems be found.

It is also a very safe testing method for operators, with most techniques being harmless to humans, although some types of test - such as radiographic testing - still need to be conducted under strict conditions. This testing technique can also help prevent injury or fatalities by ensuring structures,

components and machinery is safe.

Non-destructive testing is also a very accurate way of inspection since the tests are repeatable and a number of tests can be used together to correlate results.

These testing methods are also economical. Unlike destructive testing, NDT is cost effective as it can prevent the need to replace an item before malfunction occurs without destroying the piece itself.

This testing technique also offers operators' peace of mind, knowing that equipment is functioning as it should, preventing future accidents and determining any measures that can be taken for life extension.

It is also useful for testing of welds and verification of welding procedures to ensure that a welding process has been completed to the correct specification within the bounds of quality control, for example to make sure that the base metal has reached the correct temperature, cooled at the specific rate and that compatible materials have been used to prevent welding defects.

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

# M/s. Girish Chandra Ghosh & G.G.S.

offer a full suite of NDT Services all designed to thoroughly vet the integrity of the inspected item:

**Leading Storage Tank Calibrator & Surveyor, NDT Inspection work in India & Abroad**

**Specialist in Storage Tank Calibration, Settlement & Roundness Test, P&I Drawing NDT work & Inspection Survey**

## M/S. GIRISH CHANDRA GHOSH & G.G.S

### Magnetic Particle Testing (MPT)

A quick and low-cost option for testing parts of varying size and shapes, this method is used for testing ferromagnetic pieces, such as iron, steel, nickel, cobalt, and alloys made of these metals. It is a highly sensitive method of testing for laps, seams, and other surface or near-surface discontinuities. Our team will apply a wash of very fine ferromagnetic particles to a piece and then magnetize it. The particles are highly visible under fluorescent lighting, and when magnetized they are drawn into any discontinuity and take on the shape and contours of the damage.

### Liquid Penetrant Testing (PT)

One of the most sensitive methods for detecting small surface indications in ferrous and nonferrous metals, alloys, fired ceramics, powdered metals, glass, and other materials. This process is fully portable and can pinpoint discontinuities that are open to the surface. With the use of high-visibility penetrating liquids our team will coat the surface in question and then wipe away the excess. Afterwards, a highly absorbent developer is applied, and any trapped penetrant is drawn forward, highlighting any discontinuities.

### Visual Testing (VT)

This method is based on the inspection for flaws that are visible to the naked eye and is the most commonly used NDT method across all industries. It allows for a feasible and fast control of quality at every step of the fabrication or maintenance process. Visual Testing is used to detect visible flaws such as deformation, welding defects and corrosion. Many tools can be used during the inspection such as a ruler, gauges, cameras, etc.

### Ultrasonic Testing (UT)

This method is used for testing neatly solid materials (fine-grained aluminum, steels, alloys, composites, and plastics), and is highly sensitive to discontinuities that are most critical to structural integrity, such as lack of fusion in welds, incomplete penetration of welds, and indications in welds. It is highly portable, and usually requires access to only one side of the object to be tested. Utilizing ultrasonic, our technicians can detect internal discontinuities and measure thickness.

### Radiographic Testing (RT)

Providing an easy and map-able rendition of internal voids and fabrication errors, this method is ideal for visualizing the internal structure of components, materials, and assemblies. It is used in examining raw materials (castings and forgings), fabrications, assemblies (misalignment or absence of internal parts), and detecting time-dependent degradation of in-service parts. Operating much like any other x-ray technology, this method does require access to both sides of an object, and creates a permanent record of the inspection for review.

# TANK SETTLEMENT SURVEY AND ROUNDNESS TEST INSPECTION IN INDIA & ABROAD

## **M/s. Girish Chandra Ghosh & G.G.S.**

Offers inspection and calibration surveys of tanks of any size shape or design. We survey tanks designed to hold oil and gas products such as crude oil, petroleum products, LPG, etc. as well as tanks designed for storage of bulk liquids, such as brewery tanks or solids, such as food or grain. We have the high-tech equipment and skilled staff to carry out advanced tank calibration surveys, providing you with the most accurate data available. The software we use is versatile and works with a variety of tank shapes and sizes. Although we use state-of-the-art equipment and highly-trained staff, the service we offer is highly cost effective. Our technicians and engineers use laser measuring devices to speed up the surveys, while also guaranteeing a high degree of accuracy. We also offer an Electro Optical Distance Ranging (EODR) laser scanning service for greater speed, safety and lower impact when strapping tanks used for storage. All of our tank calibration services adhere to international standards ISO or standards set by API (American Petroleum Institute). Tank Structural Profile.

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

# MSV SETTLEMENT SURVEY

Storage tanks require periodic surveys to monitor long and short-term movements, settlements of the foundation and other deformations such as tank shell deformation due to liquid head pressure, unproportionate sand and backfill materials or tank foundation distortion. M/s. Girish Chandra Ghosh & G.G.S. Specialized for tank floor settlement and tank verticality and measuring the deformation of the tank shell from the outside or the inside of the storage tank. M/s. Girish Chandra Ghosh & G.G.S. Adheres to API 653 standards for Tank Structural Profile Survey.

## Structural Profile Survey

### Tank Structural Profile

#### Survey includes:

- Tank Roundness.
- Ovality Survey.
- Tank Plumbness
- Verticality Survey.
- Tank Shell Settlement Survey.
- Tank Bottom Profile Survey.

## Purpose of Settlement Survey Report of Mounded Storage Vessel

Diagram of Mounded Storage Vessel

### Purpose of Settlement Survey Report

- Any Structure Built on soil is subjected to settlement. Some settlement is intrinsic in nature and this is depending on situation, some settlements are tolerable.
- At equilibrium, the application of external load to the soil surface produces the surface produces the volume change of soil, this changes referred to as settlement and it is due to compressibility characteristic of soil.
- Settlement can be occur due to major earthquake, cloudburst and major Flood.
- Necessary Steps should be taken after crossing the permissible limit of the MSV.(provided by the Fabricator according to the size of tank)

### Scope of Work:

- Necessary As per OISD-STD-150, Settlement Check of Mounded Storage Vessel is necessary on half yearly basis.
- Necessary Whether Provision of minimum three reference points (one each near the vessel
- Necessary Ends and one in the middle) have been made for monitoring the settlement.
- Necessary Whether Minimum two permanent Bench Mark have been provided away from the MSVs and earmarked.
- Necessary Whether Level of Bench Mark is traceable wrt to the Original Bench Mark from where it was transferred to MSV site.
- Necessary Comment on the condition of reference points and Bench Mark.
- Necessary Spring Support has been provided for liquid inlet/ outlet pipeline in the tunnel and Readings is being monitored on half yearly basis.
- Necessary Settlement Check has been done by using Total Station.

M/S. GIRISH CHANDRA GHOSH & G.G.S

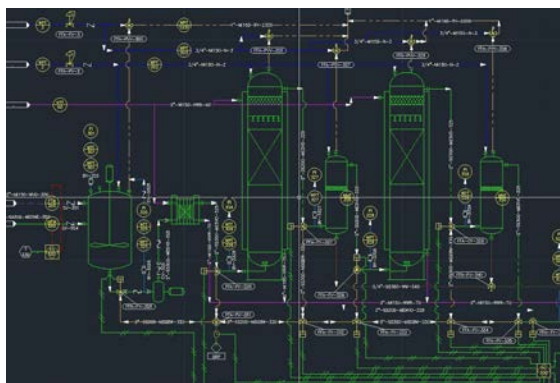

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

### **M/s. Girish Chandra Ghosh & G.G.S.**

is a premier of piping and instrumentation diagram/drawing (P&ID) services provider that is delivered on time, on budget and which embraces the latest AutoCAD technology. A P&ID is a detailed graphical representation of a process including the hardware and software (e.g., piping, equipment, instrumentation) necessary to design, construct and operate the facility. We provide piping and instrumentation diagram (P&ID) services to those engineers who wishing to outsource their mechanical projects.

Piping and instrumentation diagram (P&ID) play a very significant role in the maintenance and modification of the process. Our mechanical engineering teams of young minds and experienced heads have ability to satisfy our client's P&ID projects needs with expertise in managing mechanical engineering drawings and designs used in a variety of industries.

## **P&ID DRAWINGS SERVICES— PIPING AND INSTRUMENTATION DIAGRAM/DRAWING (P&ID)**

# M/S. GIRISH CHANDRA GHOSH & G.G.S. BASIC PROCESS FOR CREATING P&ID

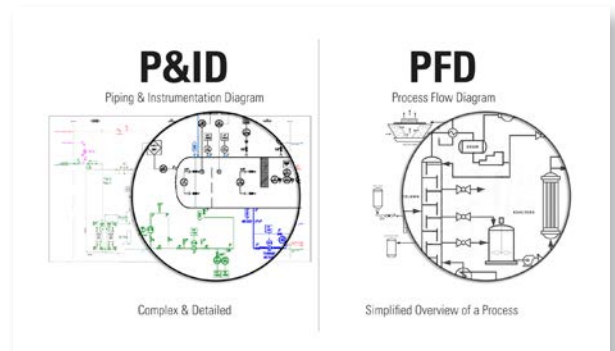

**M/S. GIRISH CHANDRA GHOSH & G.G.S**

## M/S. GIRISH CHANDRA GHOSH & G.G.S. – PIPING AND INSTRUMENTATION DIAGRAM INCLUDES:

- Pipe
- Instrumentation and designations
- Mechanical equipment with names and numbers
- All valves and their identifications
- Process piping, sizes and identification
- Miscellaneous – vents, drains, special fittings, sampling lines, reducers, increasers and sewages
- Permanent start-up and flush lines
- Flow directions
  - Interconnections references
  - Control inputs and outputs, interlocks
  - Interfaces for class changes
  - Quality level
  - Computer control system input
  - Identification of components and subsystems delivered by others
  - Intended physical sequence of the equipment

- Pipe lines are represented by single lines in P&ID
- Instrumentation signals and connection lines are represented by different types of dashed lines
- P&ID should be readable either from left to right or from right to left of the drawing
- P&ID is the representation of the process equipment/instruments sequence and not the distances between the equipment's/instruments

Contact us or email us: [www.girishcalibration.com/](http://www.girishcalibration.com/) [www.storagetankcalibration.in](http://www.storagetankcalibration.in) to know more about our piping and instrumentation diagram (P&ID) services. We follow your CAD standards. Once the first project is completed successfully, we then always stick to these details for further projects to ensure quality and consistency.

- Digital Weighing Machine (complete Weighing Solution)
- Govt. of India approved Manufacturer of Digital Weighing Machine
- Approved License from Directorate of Legal Metrology, Govt. of West Bengal
- Govt. Approved manufacturer & Repairer of Weighing Machine, Measuring Instrument

Beam Scale, Weights, Oil bulk  
Flow Meter, Liquor Measures and  
Weighbridge maintenance

**BENGAL'S HERITAGE AND MANY  
AWARD WINNER COMPANY**

**ONE STOP SERVICE**

**Repairing, Annual  
Maintenance & Re-verification  
Assistance Work**

We take pleasure to introduce ourselves as leading weighing machine (Electronic & Mechanical) manufacturer/ repairer/maintenance contractor and dealer in West Bengal since long time, also provide service for Bulk Flow meter. We do coordination work with Legal Metrology Dept. and follow their acts and rules.

According to statutory obligation each weighing scale has to be re-verify every year by the office of Legal Metrology (Weight & Measure Dept.) Govt. of West Bengal.

Accuracy in your Weighing scale will meet statutory obligation of Legal Metrology Dept. and ascertain gain or loss in sales/purchase to provide reliable means of maintaining adequate control over production/ protection/consumer benefit also.

Many national, Multinational and private reputed concerns having service from our company regarding repairing/maintenance and re-verification assistance every year. We are always at your service.

Dear Sir:

This refers to the 57th Annual General Meeting of our Federation held on 14 September 2018 at The Park Hotel, Kolkata.

We would like once again to take the opportunity to acknowledge and convey our most sincere appreciation to you for your generous sponsorship which went a long way in helping the event achieve the success it did.

We are pleased to enclose a photograph relating to it to be part of your memorabilia.

We do look forward to your continued association with our future activities.

Thank you very much indeed.

With regards,  
**Biswanath**
